

VENUS FLY TRAP

REGION OF ORIGIN

Eastern United States

LIGHT

Thrives in full sunlight from the north, east, or west.

SOIL

Use a nutrient-poor, acidic medium, such as a mix of sphagnum moss and sand.

WATER

Water with distilled water. Keep the soil consistently moist; avoid letting it dry out completely between waterings.

FERTILIZER

Not necessary, but occasional feeding with bugs or a monthly fertilization during spring through fall is beneficial.

TEMPERATURE

Venus fly traps prefer a warm humid environment. Keep cool in winter to mimic its natural habitat.

ISSUES + FIXES

Rarely troubled by pests; inspect new plants for pests before introducing them.

PRUNING & PROPAGATION

Propagate by division or seeds in spring, ensuring proper moisture and light conditions for successful growth.

PET FRIENDLY ?

While non-toxic for pets, avoid letting them consume plants as it can lead to minor stomach upset.
